

Introduction

Objective

Much Ado About Books is an online community of readers sharing book recommendations, reviews, following authors, reading special articles and a hell lot more things you can or cannot imagine doing as a reader.

This website has been specifically designed for a member to be able to find out almost any book in the world on any topic they like. They've this convenient option of adding a book or a new edition of book (if it's not mentioned yet) too! Also in case you are confused about which study materials to use, this site helps you to know which exam you should take on the basis of your interests.

Purpose :

1. To find out the names of interesting/popular/classic/any books that you would like to read in different genres.
2. To enjoy reading humorous perceptions of books written by avid readers around the world. Not only humorous, there are insightful reviews available as well. Moreover you can write your own review!
3. To be a part of one or many of the reading groups on the site which hold monthly reads, discussions, quizzes... If you want to share your thoughts on a book you feel deeply about to someone, your group is your home.
4. To take part in quizzes, trivia to have fun! All trivia are based on much loved books.
5. To share and compare book lists, recommendations, progress of reading a book with a friend, keeping track of all the books you've read, attaining your yearly goal of reading a number of books and the list goes on.

Whether it's for reading or writing, this website is one of the best place to be at if you're an ardent book lover.

As we first open the website we comes across –

1. HOME page contains the navigation menu using which users can easily visit various sections of website. This page is divided into sections telling us about various aspects.
2. GIFTS section includes various gift ideas of this Mother's Day. This section gives idea about things that can bring smile to all the mothers .
3. GENRES section of this website contains the information about the various genres that a reader might be interested in . This section further tells the user which books are popular in the respective genres.
4. AUTHOR section shows the famous contemporary writers who never fail to satisfy us with their words.
5. CONTACT section provides the user a way to connect with team and provide you reviews and any new suggestions.

This website uses font awesome icons and sliding images to make it more attractive.

Also this website takes your reviews and store them so that the team can understand the user well.

Technology and Languages Used

HTML5 is a markup language used for structuring and presenting content on the World Wide Web. It is the fifth and latest major version of HTML that is a World Wide Web Consortium (W3C) recommendation. The current specification is known as the HTML Living Standard and is maintained by a consortium of the major browser vendors (Apple, Google, Mozilla, and Microsoft), the Web Hypertext Application Technology Working Group (WHATWG).

Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML or XML (including XML dialects such as SVG, MathML or XHTML).^[1] CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript.^[2]

CSS is designed to enable the separation of content and presentation, including layout, colors, and fonts.^[3] This separation can improve content accessibility; provide more flexibility and control in the specification of presentation characteristics; enable multiple web pages to share formatting by specifying the relevant CSS in a separate .css file, which reduces complexity and repetition in the structural content; and enable the .css file to be cached to improve the page load speed between the pages that share the file and its formatting.

JavaScript often abbreviated as **JS**, is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS. As of 2022, 98% of websites use JavaScript on the client side for webpage behavior, often incorporating third-party libraries. All major web browsers have a dedicated JavaScript engine to execute the code on users' devices.

Google Sheets is a spreadsheet application included as part of the free, web-based Google Docs Editors suite offered by Google.

The allows users to create and edit files online while collaborating with other users in real-time. Edits are tracked by which user made them, along with a revision

history. Where an editor is making changes is highlighted with an editor-specific color and cursor. A permissions system regulates what users can do. Updates have introduced features that use machine learning, including "Explore", which offers answers based on natural language questions in the spreadsheet.

Features:

1. Editing

Google Sheets serves as a collaborative tool for cooperative editing of spreadsheets in real time. Documents can be shared, opened, and edited by multiple users simultaneously and users can see character-by-character changes as other collaborators make edits.

2. Explore

If a user assigns a task within a Sheet, the service will intelligently assign that action to the designated user. Google states this will make it easier for other collaborators to visualize who is responsible for a task. When a user visits Google Drive or Sheets, any files containing tasks assigned to them will be highlighted with a badge.

3. Integration with Charts

Sheets can produce Google Charts and has a third-party plugin which allows for integration with Wikipedia

PHP (recursive acronym for PHP: Hypertext Preprocessor) is a widely-used open source general-purpose scripting language that is especially suited for web development and can be embedded into HTML. PHP is mainly focused on server-side scripting, so you can do anything any other CGI program can do, such as collect form data, generate dynamic page content, or send and receive cookies. But PHP can do much more. There are three main areas where PHP scripts are used:-

- Server-side scripting. This is the most traditional and main target field for PHP. You need three things to make this work: the PHP parser (CGI or server module), a web server and a web browser. You need to run the web server,

with a connected PHP installation. You can access the PHP program output with a web browser, viewing the PHP page through the server. All these can run on your home machine if you are just experimenting with PHP programming.

- Command line scripting. You can make a PHP script to run it without any server or browser. You only need the PHP parser to use it this way. This type of usage is ideal for scripts regularly executed using cron (on *nix or Linux) or Task Scheduler (on Windows). These scripts can also be used for simple text processing tasks.
- Writing desktop applications. PHP is probably not the very best language to create a desktop application with a graphical user interface, but if you know PHP very well, and would like to use some advanced PHP features in your client-side applications you can also use PHP-GTK to write such programs.

The fast and dramatic changes in information technology especially in last one decade have given new concept of marketing in which buyer and seller do not see each other face to face nor see the goods physically; the whole transaction is carried out with the help of ‘online’ communication. The entire deal is carried out with the help of computer-telecommunication and networking with associated hardware and software

Hardware and Software Requirements

VS CODE

Hardware :

Visual Studio Code is a small download (< 200 MB) and has a disk footprint of < 500 MB. VS Code is lightweight and should easily run on today's hardware.

We recommend:

- 1.6 GHz or faster processor
- 1 GB of RAM

Platforms :

VS Code is supported on the following platforms:

- OS X El Capitan (10.11+)
- Windows 8.0, 8.1 and 10, 11 (32-bit and 64-bit)
- Linux (Debian): Ubuntu Desktop 16.04, Debian 9
- Linux (Red Hat): Red Hat Enterprise Linux 7, CentOS 7, Fedora 34

Not supported :

- VS Code does not support application virtualization solutions such as Microsoft App-V or MSIX for Windows, or third-party app virtualization technologies.
- Running VS Code in a virtual machine environment requires a full operating system.
- VS Code does not support multiple simultaneous users using the software on the same machine, including shared virtual desktop infrastructure machines or a pooled Windows/Linux Virtual Desktop host pool.
- Running the full VS Code in Windows/Linux containers is not supported but running with the Dev Containers extension is supported. When using the Dev Containers extension, the VS Code server is running in the container while the VS Code client is on the desktop.

AMPPS Server

AMPPS stands for Apache, MYSQL (My Structured Query Language), PHP (Hypertext Processor), PERL (Practical Extraction and Report Language), Python and Softaculous (software stack)

Ampps is a bloat-free stack which comes with just one PHP, Apache, MySQL, MongoDB, Softaculous and phpMyAdmin which makes it light weight. You can install more apps with one click as per your need and preference. You can install multiple PHP versions and switch between these versions as needed by your project
.

AMPPS is a software stack from Softaculous enabling Apache, Mysql, MongoDB, PHP, Perl, Python and Softaculous auto-installer on a desktop. This includes everything you need for website development. Start developing your website from open source web applications or just start writing code yourself.

System Requirements for AMPPS :

Supported Operating Systems are Windows 11, 10, 8, 7 and Vista Windows Server 2022, 2019, 2016 and 2012. Supported only on **64-bit** processor. Windows XP and Windows Server 2008 or lower is not supported.

Note :You must have administrator privileges on your computer to run AMPPS.

OUTPUT

A screenshot of a web browser showing the homepage of 'Much Ado About Books'. The header includes the site's name and links for 'GENRES', 'SPECIAL GIFTS', 'AUTHORS', and 'CONTACT'. The main content area asks 'What would you like to read today??' and lists six categories with corresponding icons: HORROR (orange circle with a ghost), MYSTERY & CRIME (orange circle with a magnifying glass), SCI FI (orange circle with a rocket ship), ROMANCE (orange circle with a heart), BUSINESS (orange circle with a briefcase), and STUDY MATERIAL (orange circle with a pencil). Each category has a brief description below it. The taskbar at the bottom shows various open applications and the date/time '22-05-2023'.

A search for a missing girl leads detective Alex Rainer into a run-down apartment in Whitechapel, London. Inside, he finds one of the most horrific scenes he's seen in his twenty-year career.

A mass of dismembered body parts arranged on the victim's bed to resemble a human figure, perfectly assembled with methodical precision.

FUTURE SCOPE

Adapting to change is the critical requirement for being in consistent use and demand be it related to business or technology. The same is true for online book information website that handle and provide information according to the interests of the reader . The website need to adapt to the changes more precisely with a wide range of data according the approach of users that they are following for searching well suited reading material.

The website have to be more active and find new ways to excite them and offer solutions with the right kind of opportunities and content. The website also have chances of success in the future since along with time everything is mostly turning digital and a proper guidance is needed. Websites like these can future can be much more promising and profitable with a holistic approach to handling the requirements and maintaining relevance in the digital environment.
